

Different Types of Operators in C Language

Operators are symbols used to perform operations on variables and values.

1. Arithmetic Operators

Operator	Meaning
+	Addition
-	Subtraction
*	Multiplication
/	Division
%	Modulus

Example:

```
c = a + b;
```

2. Relational Operators

Operator	Meaning
==	Equal to
!=	Not equal to
>	Greater than
<	Less than
>=	Greater than or equal to
<=	Less than or equal to

Example:

```
if(a > b)
```

3. Logical Operators

Operator	Meaning
&&	Logical AND
	Logical OR
!	Logical NOT

Example:

```
if(a > 0 && b > 0)
```

4. Assignment Operators

Operator	Meaning
=	Assign
+=	Add and assign
-=	Subtract and assign
*=	Multiply and assign
/=	Divide and assign

Example:

```
a += 5;
```

5. Increment and Decrement Operators

Operator	Meaning
++	Increment
--	Decrement

Example:

```
i++;
```

6. Bitwise Operators

Operator	Meaning
&	Bitwise AND
	Bitwise OR
^	XOR
~	Complement
<<	Left Shift
>>	Right Shift

7. Conditional Operator

Conditional Operator is also called Ternary Operator.

Syntax:

```
condition ? expression1 : expression2;
```

Example:

```
max = (a > b) ? a : b;
```
